PROJECT PORTFOLIO

Hardeep Kaur | Aspiring Data Analyst

Retail Sales Analysis Dashboard (2023–2026)

Project Overview

This project analyses retail sales performance from 2023 to 2026 using Power BI. It provides insights into sales trends, profitability, product performance, and regional distribution.

Business Problem

Organizations often struggle to identify key drivers of profit and loss across products and regions.

This dashboard helps stakeholders make data-driven decisions quickly.

Tools & Technologies

- Power BI
- Excel
- Power Query
- DAX
- SQL (Data Exploration)

Key Features

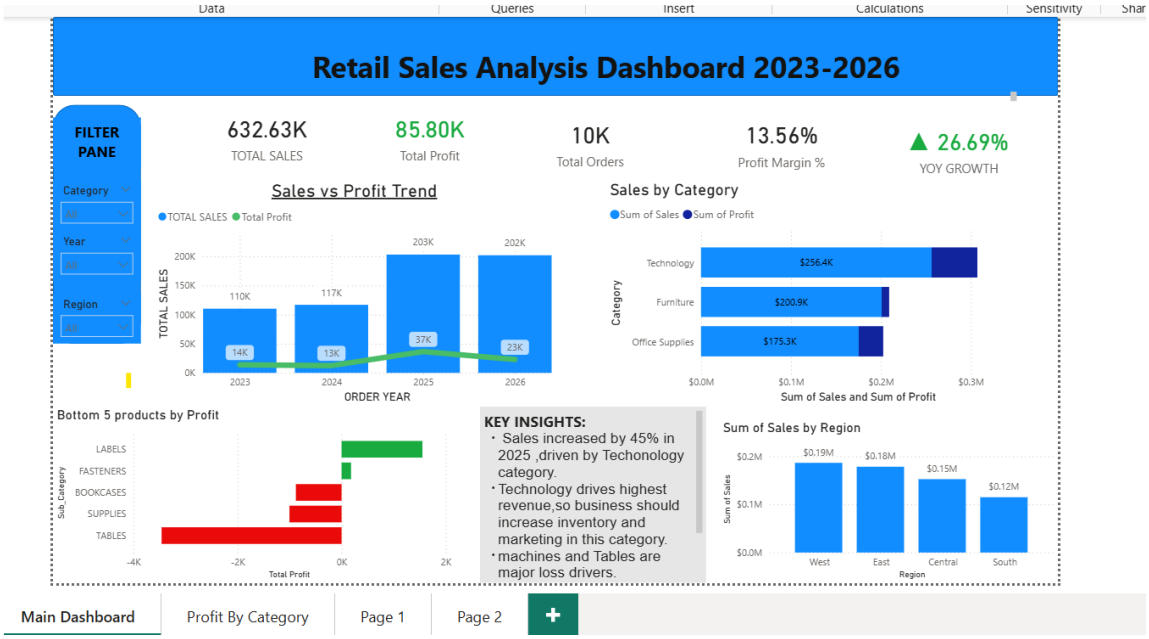
- KPI metrics (Sales, Profit, Orders, Margin, YoY Growth)
- Sales vs Profit trend analysis
- Category and region analysis
- Loss-making product identification
- Interactive filters

Key Insights

- Sales increased by ~45% in 2025 driven by Technology
- Technology category contributes highest revenue
- West region leads sales performance
- Profit margin is 13.56%

Business Recommendations

- Increase focus on high-performing categories
- Re-evaluate pricing for loss-making products
- Expand in top-performing regions
- Optimize discount strategies



What I Learned

Developed skills in Power BI dashboarding, DAX calculations, and business storytelling.
